DETAILED ACTION

Allowable Subject Matter

1. **Claim 1, 2, 5, 6, 9 - 13, and 15** (now renumbered 1 - 4, 10, 5, 6, 8, 7, and 9 respectively) are allowed.

2. The following is an examiner's statement of reasons for allowance:

For independent **Claims 1 and 15**, while the closest prior art at least provides an image sensor with a voltage boosting circuit for producing a boosted reset voltage on a reset line such that the boosted reset voltage is a level higher than a power supply output voltage level and a voltage protection circuit that is connected to the reset line such that at least one transistor is protected against being forward biased by said boosted reset voltage; wherein the voltage boosting circuit is comprised of a first capacitor and first and second switching elements for the charging the capacitor;

The closest prior art does not teach or fairly suggest wherein a voltage that is greater than the power supply voltage level does not forward bias the second switching element of the voltage boosting circuit or wherein the voltage boosting circuit further comprises a second capacitor for producing a second output, a first passing transistor in series between a boosted reset voltage and an output line, and a second shorting transistor connected between the output line and ground.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
